

## **Tests Before The Surgery (Pre-operation Work-up)**

Once you have decided to get operated we should do some blood tests to prepare your body for this surgery. This involves a check-up by an anaesthetist and a physiotherapist. These visits are geared to intimate you about the procedure followed during surgery and prepare you for a faster recovery. We will need to get some tests done. They are:

- Complete Blood Count
- ESR - Erythrocyte Sedimentation Rate
- CRP - C Reactive Protein
- Blood Sugar - Fasting
- LFT - Liver function Test including S. Proteins and enzymes.
- S. Creatinine
- BUN
- S. Electrolytes
- HIV
- HbsAg
- HCV
- Blood Grouping
- Bleeding / clotting time
- Prothrombin time / Index
- Urine - Routine / Microscopy
- Urine – Culture sensitivity
- ECG
- 2D Echo
- Xrays - Chest PA view - Both Knees - AP standing and lateral
- Special tests: Additional tests
- Blood sugar PP (2 hrs. After Lunch) - Diabetes
- Pulmonary function tests - Asthma
